📝 Test Case Title:

Join Meeting from home

◆ Preconditions:

- User must have the latest build installed
-

◆ Steps to Execute:

1. Install the latest build from WhatsApp
 2. Login to the application
 3. Navigate to the Home screen
 4. Swipe down to locate the **Meetings** tab
 5. Click on **Join** (test with Deepak)
-

◆ Expected Result:

- User should be redirected to the meeting call
-

◆ Actual Result:

- User successfully joins the meeting call
-

◆ Status:

✓ Pass

◆ Executed By:

Ankit Kumar

◆ Comments:

- The feature works correctly, but it is not user-friendly
 - Meeting notifications should appear at the top of the Home screen
-

◆ Automation:

- No need to automate

Test Case ID: TC_02

Test Case Title:

Visibility of presented screen from other users

◆ Preconditions:

- User must have the latest build installed
-

◆ Steps to Execute:

1. Navigate to the Home screen
 2. Swipe down to locate the **Meetings** tab
 3. Click on **Join** (test with Deepak)
 4. Another user starts screen sharing from mobile or web
-

◆ Expected Result:

- User should be able to see the presented/shared screen
-

◆ Actual Result:

- User is able to successfully see the presented screen
-

◆ Status:

 Pass

◆ Executed By:

Ankit Kumar

◆ Comments:

- The feature works correctly, but it is not very user-friendly
 - Meeting notifications should appear at the top of the Home screen
-

◆ Automation:

- No need to automate

Test Case Title:

Install latest build over existing build

◆ Preconditions:

- User must have a previous version of the application installed
-

◆ Steps to Execute:

1. Navigate to the new build file
 2. Tap on the new build
 3. Click on **Install**
 4. Launch/Open the application after installation
-

◆ Expected Result:

- The application should be successfully installed over the existing build
 - User should remain logged in (if applicable)
 - New features and changes should be visible and working correctly
-

◆ Actual Result:

- New features and changes are not visible after installation
 - In some cases, installation fails with errors like:
 - "Cannot install due to different package name"
 - "App conflicts with existing application"
-

◆ Status:

 Fail

◆ Executed By:

Ankit Kumar

◆ Comments:

- The new build installs over the previous build in some cases
 - However, installation intermittently fails due to package mismatch or existing app conflicts
 - Even when installation succeeds, updated features are not reflected
-

◆ Automation:

Not required
